CLAIMS

What is claimed is:

and

An indexing system for tagging a media stream comprising:
 at least one input that provides information for defining at least one tag;

a tagging system for assigning said at least one tag to the media;

a collaborative tag handling system for dispatching said at least one tag to a plurality of individuals for review.

- 2. The indexing system of claim 1, wherein at least one input comprises at least one speech input, and said tagging system includes a speech recognition system.
- 3. The indexing system of claim 2, wherein said speech recognition system includes a translation component that translates multiple languages into a common language, and said common language is stored in the said at least one tag.
- 4. The indexing system of claim 2, wherein said speech recognition system stores multiple languages within said at least one tag.
- 5. The indexing system of claim 4, further comprising tag information feedback to a user for editing, deleting, and adding said information in said at

least one tag.

- 6. The indexing system of claim 1, wherein said at least one tag is comprised of a plurality of fields, each of said fields storing information from said at least one input.
- 7. The indexing system of claim 1, wherein said at least one tag includes a pointer for associating said at least one tag to a timeline of the media.
- 8. The indexing system of claim 1, further comprising a tag analysis system comparing the information from each of the said at least one input to determine and correct inconsistencies therein.
- 9. The indexing system of claim 1, wherein said at least one input includes at least one sensor for creating an attribute in said tag.
- 10. The indexing system of claim 9, wherein said at least one tag includes a confidence value associated with said attribute.
- 11. The indexing system of claim 1, wherein said at least one tag includes a label identifying a language of said at least one tag.
- 12. The indexing system of claim 1, wherein said at least one tag includes a label identifying a source of said at least one tag.

- 13. The indexing system of claim 1, wherein said at least one tag includes an attribute for assigning a copyright designation therein.
- 14. The indexing system of claim 1, wherein said at least one individual comprises an individual that provides said at least one input.
- 15. The system of claim 1 wherein said tagging system includes an encryption mechanism to encrypt said at least one tag.
 - 16. An indexing system for tagging a media stream comprising:

 at least one input providing information to define at least one tag;
 a tagging system for assigning said at least one tag to the media;
 a tag database for storing said at least one tag and the media;
 a tag analysis system comparing the information from each of the said at least one input to determine and correct inconsistencies therein;
 and

a retrieval system for searching said tag database by analyzing said tags and returning results.

17. The media indexing system of claim 16 wherein said retrieval system uses a Boolean retrieval model.

- 18. The media indexing system of claim 16 wherein said retrieval system uses a vector retrieval model.
- 19. The media indexing system of claim 16 wherein said retrieval system uses a probabilistic retrieval model.
